

# Network Communication Software

## Netcomm

Netcomm, our Protocol management software, runs from the system tray enabling Picture Book or Acmpoint to communicate with any Network module that is accessible on the LAN or over the Internet. Netcomm requires Microsoft Windows 2000 or XP with the Microsoft .Net framework V.1.1 installed.

Netcomm moves away from proprietary communication protocols and uses the universally accepted TCP/IP standard; thereby fully integrating the Allen Martin energy management system within the IT infrastructure of an organisation.

For More information refer to the XNET Network Module in Section 10 of this Catalogue.

## Network Communication Software

### Computer Specification

Processor :	300 MHz or higher
RAM :	128 MB or higher
Graphics Adapter :	Super VGA graphics adapter capable of at least 1024 x 768 resolution
Mouse :	Microsoft-compatible mouse.
Hard Disk :	20 MB available hard disk space
Ports :	1 Ethernet Port
Monitor :	Super VGA Monitor capable of at least 1024 x 768 resolution
Operating System :	Windows 2000, Windows XP Home or Professional Edition with Microsoft .Net framework V.1.1
